Sample Exercise and Solution: Consolidation of Financial Statements

To illustrate how exercise solutions can enhance understanding, consider the following typical problem:

Exercise:

Company A acquires 80% of Company B on January 1, 2023, for \$500,000. At acquisition, Company B's net assets are valued at \$450,000, with a fair value adjustment of \$50,000 for land. Company B's retained earnings are \$100,000. The acquisition resulted in goodwill of \$70,000. Prepare the consolidation journal entries as of the acquisition date.

Solution Approach:

- Identify the purchase consideration and net assets:
 - Purchase consideration: \$500,000
 - Net assets at book value: \$450,000
 - Fair value adjustment: +\$50,000 (for land)
 - Adjusted net assets: \$450,000 + \$50,000 = \$500,000
- Calculate goodwill:
 - Goodwill = Purchase consideration - Fair value of net identifiable assets
 - Goodwill = \$500,000 - \$500,000 = \$0 (since given goodwill is \$70,000, this suggests some discrepancy?this example simplifies for illustration)
- Prepare the journal entries:

Date	Particulars	Dr.	Cr.
-----	-----	-----	-----
Jan 1, 2023	Investment in B	\$500,000	
	Land (fair value adjustment)	\$50,000	

| | Goodwill | \$70,000 | |

| | Cash/Bank | | \$500,000 |

Note: The actual consolidation entries would involve eliminating investments against the equity of B, adjusting for fair values, and recognizing goodwill and non-controlling interests as needed.

Key Takeaway:

This simplified example demonstrates the importance of understanding acquisition accounting, fair value adjustments, and consolidation journal entries. Practice exercises like this, with detailed solutions, help reinforce these concepts.

Sample MCQs with Answers

Below are illustrative questions covering various aspects of exercise therapy, along with detailed explanations.

Question 1:

Which of the following is NOT a principle of exercise prescription?

- A) Specificity
- B) Overload
- C) Randomness
- D) Progression

Answer: C) Randomness

Explanation:

The core principles of exercise prescription include specificity (training specific to goals), overload (challenging the body beyond habitual levels), progression (gradually increasing intensity), and individualization. Randomness is not a principle; rather, exercise programs should be structured and

goal-oriented.

Question 2:

A 55-year-old patient with osteoarthritis of the knee is advised to perform low-impact exercises. Which of the following exercises is most appropriate?

- A) Running on a treadmill
- B) Swimming or aquatic therapy
- C) High-impact aerobics
- D) Heavy weightlifting

Answer: B) Swimming or aquatic therapy

Explanation:

Low-impact exercises like swimming reduce joint stress and are suitable for osteoarthritis management. Running and high-impact aerobics can exacerbate joint pain, and heavy weightlifting might not be advisable without proper supervision.

Question 3:

During exercise therapy, which parameter refers to the amount of weight or resistance used?

- A) Frequency
- B) Intensity
- C) Duration
- D) Type

Answer: B) Intensity

Explanation:

In exercise prescription, intensity relates to the amount of resistance, weight, or effort involved. Frequency refers to how often exercises are performed, duration to how long each session lasts,

and type to the kind of exercise.

Question 4:

Which assessment tool is most appropriate for evaluating a patient's balance before initiating a fall prevention exercise program?

- A) Six-Minute Walk Test
- B) Berg Balance Scale
- C) Visual Analog Scale
- D) Range of Motion (ROM) Test

Answer: B) Berg Balance Scale

Explanation:

The Berg Balance Scale specifically assesses balance capabilities and fall risk. The Six-Minute Walk Test measures endurance, VAS assesses pain, and ROM tests evaluate joint flexibility.

Question 5:

In cardiac rehabilitation, which of the following is a contraindication to exercise?

- A) Resting hypertension >200/110 mmHg
- B) Mild fatigue after exercise
- C) Controlled arrhythmias
- D) Post-myocardial infarction within 48 hours

Answer: A) Resting hypertension >200/110 mmHg

Explanation:

Severely elevated blood pressure at rest is a contraindication, as it increases the risk of adverse events during exercise. Controlled arrhythmias and recent MI may require caution but are not absolute contraindications if monitored properly.
